Chart Group Abbreviations

When interesting data is found in a Chart Index, it is often useful to read the Tree Chart page which was indexed in that Index row. (There is usually more data on the Tree Chart than was transcribed in the Index.) Finding the indexed chart page is slightly different for the two Chart Indexes, USA and WORLD NOT USA. Both Chart Indexes use abbreviations for location groups of tree charts.

Chart Index USA

For the USA Chart Index, the "**CH-ART**" column gives the abbreviation for a USA state group of Chart pages. All pages for that state are stored in one PDF file. When a page number is also listed in this column, this is the page number written on the top right corner of the Chart page.

Note: If no page number is listed, the **FAM. NUM**. value must be used, with the county identified in the "ORIGINS" column. In each USA state group, Chart pages are grouped and ordered alphabetically by county name. Within each county, pages are grouped and ordered numerically by family number. The first letter in a **FAM. NUM**. suffix usually refers to a page within a group of pages for that state and family number. Specifically, the letter A refers to the first page in the group, the letter B refers to the second page, etc. No suffix refers to the first page in a group of pages.

Note: For family 9000, Don Whiteside had a separate overlapping notebook of Charts. These Charts are sometimes much easier to read than the corresponding Charts in the state notebooks. These family 9000 Charts are available under Members Research, Family Genealogies in a series of 14 document files starting with "Family 9000 A: Index…".

Chart Index World Not USA

For the World Chart Index, the **CH-ART** column gives an abbreviation for the location-based group of Chart pages. Within each such group, the chart pages are numbered as in the file. The following table lists each of these **CH-ART** abbreviations with the corresponding group of chart pages.

Table Notes:

Group Abbreviations- New. A few page groups are named using old abbreviations, instead of the current standard abbreviation listed in Chart Index Abbreviations. (For example, the Canadian province of Ontario has the old abbreviation ONT, used in tree charts and chart names, and the new abbreviation ON, used within the Chart Indexes.)

For most UK books, there are several chart files. The specific files will be referenced by:
